BRAVO

Characteristics

>> Due to the special design of its tires and weight distribution, Bravo absolutely minimizes damage to fairways and those areas around greens, trees and bunkers which are most susceptible to damage. Unlike conventional golf cars, Bravo doesn't require a car path.

>> Totally silent and eco-friendly electric motors. This feature allows partners to talk at a comfortable level, and not disturb the game of others.

>> Because it is a single rider car, it allows each player to tend to his own ball, allowing for faster play.

>> Allows physically challenged players to enjoy the game.

>> Very low maintenance.

>> Light and easy to dismantle, fits in most car trunks.

>> Complete standard equipment: Sweater basket, ball holder, pencil and scorecard holder, parking brake, battery indicator, forward and reverse switch and a rear mud guard.

Main features

Length	1300 mm
Width	700 mm
